Chalonnnes, le 22.04.2016

Bucher Vaslin launches its new cross flow filter Flavy FX ICS: A concentrate of user friendliness and performance.

Result of 2 years of research and development at Bucher Vaslin, the new filter Flavy ICS provides the user with a yet improved ease of operation and performances.

Flavy ICS is equipped with a large colour touch screen interface which is making the operation easier than ever: the pictograms are simple and intuitive, menu navigation is seamless, the filtration settings allow an even sharper level of fine tuning and the data logging facility provides records over the last 20 filtrations.

The filtration process itself has also been improved yet again to benefit wine quality, improve reliability of the machine: smooth processing, low pressure filtration, focus on the stability of the filtration flow rate.

Thanks to those major technical evolutions, the Flavy FX ICS is more than ever an efficient production tool preserving the wine quality and easy to use.

Oenological and technical experts of Bucher Vaslin have one more time extended the scope of application for which the cross flow filter can be used: young wines filtration, wine straight off cold stab or settling, thermo wines, barrel lees, ability to inject oenological products before or after the filtration membranes (UF bentonite, MRC, Sorbate, CMC, Arabic gum) and more.

Contact your Bucher Vaslin Dealer for more information.
